KAYLA SOKULLU

(647) 917-1955 | Toronto, ON | kayla.sokullu@gmail.com | linkedin.com/in/kayla-sk

EDUCATION

Western University **London, ON**
Bachelor of Engineering Science, Software Engineering with Co-op *Expected April 2028*
Relevant Coursework: Data Structures and Algorithms I & II, Web Technologies, Computer Networks, Database Management Systems, Software Project Management, Operating Systems

EXPERIENCE

Automation Analyst Intern **Toronto, ON**
RBC, *Client Systems Engineering Team* *Fall 2026 - Present*

- Automated data-integrity checks by designing a full-stack Spring Boot dashboard, adopted team-wide, that uses Selenium on a daily job to verify host database tables against upstream FiBRS data, cutting check time by 80%
- Enabled BDD testing of tax rules by engineering and designing a complete boundary test data set across 3 flows (API → Kafka → MongoDB) without source code, then presenting coverage and defect findings to team leads in Agile stand-ups
- Reduced automation runtime and cut flaky test failures across 8 client-profile REST and GraphQL APIs by optimizing retry logic and replacing static waits with dynamic polling, using AI tooling to refactor while meeting code quality standards

Software Engineering Intern **Toronto, ON**
Ingram Micro, *Business Systems Development* *Summer 2026*

- Developed an AI agent, improving support resolution time by 45%, which connected to Document360's knowledge base via an MCP server, deployed in Microsoft Teams and Copilot so support agents can instantly self-serve article lookups
- Improved MTTR by 70% across 3 LLM-powered support pilots by automating an API-driven testing pipeline that generates and evaluates tickets at scale, replacing manual QA workflows and greatly accelerating test cycle turnaround
- Prototyped 4 knowledge base solutions (HTML UI, knowledge widget, API-driven interface, AI/MCP integration) to validate real-time knowledge base access, match the company brand and theme, and enable personalized article targeting

Software Engineering Intern **Toronto, ON**
Ingram Micro, *Business Systems Development* *Summer 2025*

- Deployed an AI-powered search integration using LLM tooling to reduce ticket volume, enabling improved user self-service
- Upskilled 18 team members in API scripting by supporting weekly internal training sessions to grow development capabilities
- Accelerated data analysis for weekly team meetings by engineering a full-stack feature that analyzes Zendesk ticket and user data, integrating it into the team's unified frontend for continuous data pulls and deploying it to production
- Saved 5+ hours of manual work per week by creating end-to-end a automated backup workflow powered by REST APIs

PROJECTS

AI Automated Swing Trading System — *Python, FastAPI, React, Pine Script*

- Built end-to-end an automated trading system in Python using RSI(2) strategy signals from TradingView to trigger a 4-agent AI pipeline with 13s end-to-end latency and deployed with a React dashboard and live paper trading integration

Full-Stack Course Management Web Application — *REST APIs, JavaScript, Node.JS, AWS, JWT*

- Worked in a team to build and deploy a secure full-stack course management system on AWS EC2 supporting workflows for students, teachers, and admins to manage course content and access permissions within a centralized and scalable platform

LEADERSHIP EXPERIENCE

Western Women in Engineering

- Mentored 2 students through personal and academic challenges, campus engagement and recruiting, providing ongoing guidance and support throughout their university experience to help them thrive both academically and professionally

Learning Disabilities Association London Region

- Provided weekly tutoring for students with learning disabilities, improving academic skills, confidence and independent learning through tailored lesson plans, progress tracking, and close collaboration with parents to ensure consistent support

SKILLS/INTERESTS

Frameworks/Languages: Java, Python, JS (React, Node.js), OOP, REST APIs, SQL, BDD, Spring, GraphQL
Cloud/DevOps: AWS (EC2), GCP, Vercel, Atlassian, CI/CD, Figma, Helios, GitHub Action, Docker, K8, DataDog
Methods/Network: Agile, Scrum, Prototyping, QA, UAT, P2P, OS, ServiceNow
Interests: Travel (Snowboarding), Piano (RCM 9), Crime Documentaries, Architecture, Pickleball, Golf, Sailing, Pilates
